

Adaptive Cryptographic Intelligence Platform

AI-driven visibility, PQC readiness and compliance without decryption or operational disruption.

Platform Overview

100% network-based cryptographic asset discovery - AI-powered PQC readiness & risk scoring - Guided remediation playbooks

The Venari Adaptive Cryptographic Intelligence Platform is a unified, AI-powered service that ‘over the network’ discovers, maps, scores, and aides’ remediation of cryptographic risk across the entire digital estate — from legacy mainframes to cloud native microservices.

Platform Overview

Venari Security's Adaptive Intelligence Cryptographic Platform delivers complete visibility and control over your cryptographic landscape through a proven methodology:

Discover → Inventory → Assess → Prepare → Monitor

From initial asset discovery through to continuous monitoring, our platform systematically identifies every cryptographic implementation across your environment, evaluates risk exposure, and guides your transition to quantum-safe standards.

Delivering:

Complete Crypto Visibility — Automatically discover and inventory all cryptographic assets across internal and external systems.

Cryptographic Bill of Materials — Visualise your entire encryption landscape in a clear, auditable format that stakeholders and regulators understand.

Actionable PQC Roadmap — Move beyond assessments to guided remediation with practical migration pathways to post-quantum cryptography.

Continuous Compliance — Streamline regulatory requirements while maintaining long-term audit trails of cryptography usage and improvements.

Seamless Integration — Connect directly with your existing CMDB and security infrastructure for unified risk management.

Methodology

Our methodology remains always the same.

Inventory

Complete discovery of all crypto assets across your infrastructure

Visualisation

Cryptographic Bill of Materials (CBOM) for complete visibility

Guided Remediation

Step-by-step PQC migration process with actionable roadmaps

Audit

Long-term cryptography usage tracking and compliance evidence

Streamline

Simplified regulatory compliance and reporting workflows

PQC Ready

Future-proof your encryption against quantum threats

Continuous Compliance Reporting

One-click evidence packs for all the different cryptographic frameworks or internal standards

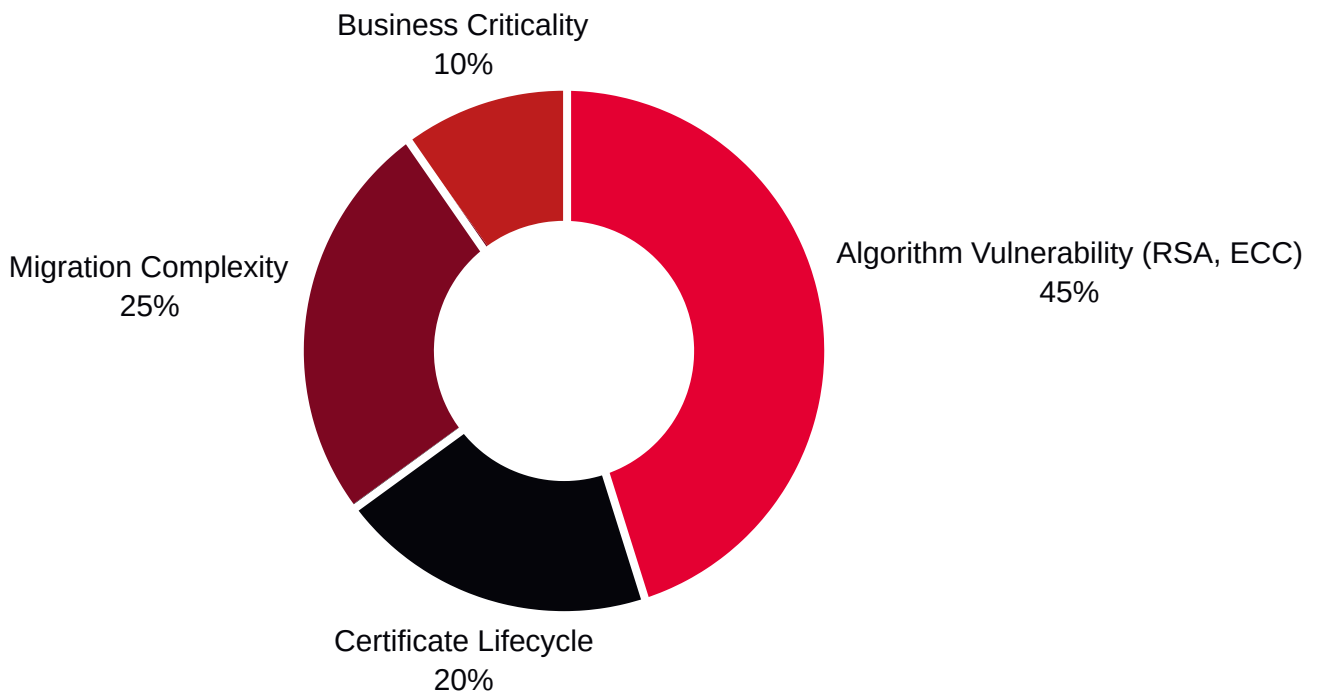

Drift detection with SIEM/SOAR integration or any other system

Natural Language Reports to simplify the understanding of millions of information points for both technical users and board & auditors

AI-Powered PQC Readiness & Risk Scoring Methodology

Why organisations choose Venari?

Venari's toolkit addresses cryptographic assurance holistically:

Advanced Visibility Without Decryption: Preserves privacy while uncovering hidden vulnerabilities essential for PQC planning.

Proactive Quantum Threat Detection: Detects cryptographic risks early, allowing organizations to prioritize high-impact assets and build a roadmap for migrating to quantum-resistant standards.

Regulatory Compliance Assurance: Alignment with NIST, DORA, PCI, GDPR, and NCSC guidelines, automating compliance checks and generating reports to demonstrate readiness for regulators.

Crypto-Agility and Seamless Migration Support: Venari's approach to PQC and crypto-agility helps reduce migration timelines from years without operational disruptions.

Proven Innovation and Expertise: combining AI, machine learning, and behavioral analytics to future-proof encryption the focus on current threats and quantum futures builds long-term confidence.

Sovereign: The only UK and European company providing cryptographic services at scale.

What You Get

100%

Compliance coverage across all major standards

30 Days

Average time to comprehensive assessment

3

Methods of deployment; two frictionless.
